

HIGH VOLTAGE SAFETY LINE ACTS IN VIRGINIA AND NORTH CAROLINA

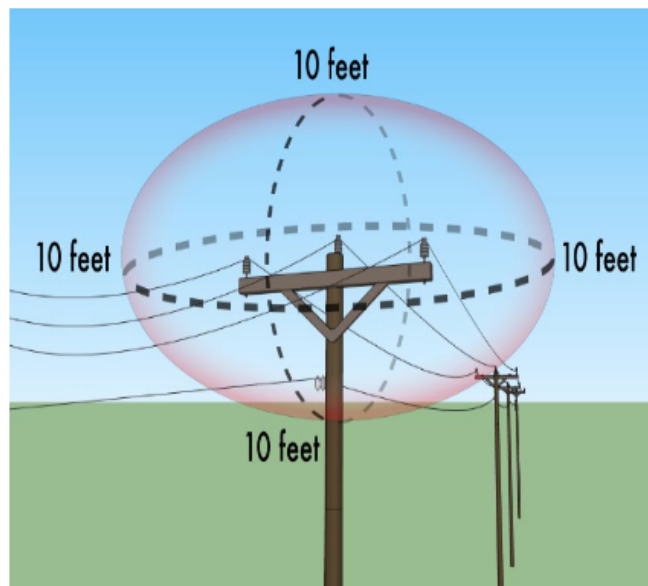

Each State has specific requirements concerning personnel working or operating equipment near overhead high-voltage lines of 600 volts or higher. These requirements provide a safe work environment by addressing notification requirements, safety arrangements, warning sign usage, and other job-site practices. Refer to www.osha.gov, your State OSHA Program and the Overhead High Voltage Line Safety Act, in both Virginia and North Carolina, for the specific notification requirements and procedures for working with cranes and other equipment around overhead powerlines.

Cranes and derricks must remain 20 feet away from lines up to 350 kV and 50 feet away from lines greater than 350 kV until the operator has taken specific safety measures. OSHA regulations and state laws require the operator of cranes, derricks, or other similar equipment to notify the power company before working near any overhead power line.

If it is necessary for any person, tools, machinery, ladders, antennae, equipment, supplies, materials or apparatus to be within 10 feet of any overhead high voltage line, the person must notify the power company.

The person responsible for doing the work must call the Company at **1-866-DOM-HELP** within the time frame required by each State. The Company will then assist you in providing a safe working environment. In all cases, notify the Company immediately in an emergency situation.

The Company will need certain information when you call such as: your name; location or address of the proposed tract or parcel of land; the name, address and work day telephone number of the person responsible for the work; a job site telephone number if available; the type and extent of the proposed work; the name of the person for whom the proposed work is being performed; the time and date of the notice; and the approximate date and time when the work is scheduled to begin and be completed.

**** REMEMBER ****

Before working near overhead lines, call Dominion toll-free at **1-866-DOM-HELP**.

Required notices and other procedures for working with cranes and similar equipment around overhead power lines are part of the Overhead High Voltage Line Safety Act, in both Virginia and North Carolina.
